

## How to Create a Webpage Shortcut on Your Android Homescreen (using Chrome)

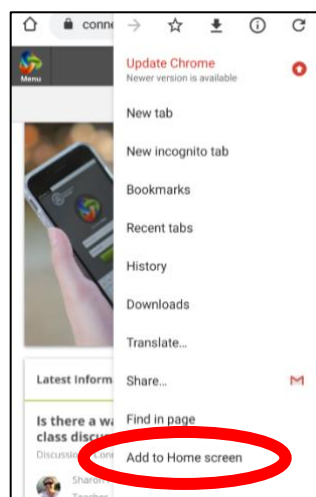

- 1) Open Chrome and navigate to the webpage for which you want to create a shortcut icon. If it is Connect, you will need to login first.
- 2) Click the ‘triple dot’ button at the top right. This will bring up a menu of options. *See Picture 2.*
- 3) Select ‘Add to Home Screen’. *See Picture 3*
- 4) You’ll be prompted to enter a title for your shortcut. You can change it or leave the default title of the webpage. Select ‘Add’. *See Picture 4.*

That’s all there is to it. You now have an icon on your home screen that you can tap to bring you to the webpage. The icon will appear as a thumbnail screenshot of the webpage in the normal shape of an app icon and it behaves like any other app icon – you can move it around.
